

Sakshi Kiran

PES1UG24AM242

1. Did your estimations reflect the actual effort?

The story points provided a useful relative estimate of the effort and complexity of the user stories. However, the actual effort could only be partially validated because the sprint was simulated and the work was not carried through a full development cycle. Therefore, the estimates were useful for planning, but more completed sprint data would be needed to compare estimates with actual effort.

2. Was your backlog well-prioritized?

Yes, the backlog was reasonably prioritized according to user impact. The stories were assigned priority levels, with higher-impact work given higher priority. For example, the financial-information update story was marked High priority, while the profile-creation story was assigned Medium priority. This makes the backlog easier to use for deciding which work should be taken into a sprint first.

3. How did your simulated sprint align with your plan?

The simulated Sprint 1 aligned with the plan at the setup level: the selected user stories were placed into the sprint, story points were assigned, and the sprint was started in Jira. The execution was only partially aligned with the plan because the available evidence shows the sprint being started and then ended without a full progression of the stories through In Progress and Done.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed an initial workload of 6 story points and a downward planned trajectory toward zero. Because the sprint ended very quickly and there was little recorded completion activity, the chart does not provide enough real completion data to accurately measure team velocity or capacity. The main insight is that meaningful capacity analysis requires completing work during the sprint and recording those changes over time.

Epic 5: Default Monitoring & Warnings

+ ...

Description

Story 9

Monitor Repayments

As a peer lender, I want the system to monitor borrower repayments, so that I can track whether payments are being made on time.

Priority: Medium

Story Points: 5

Story 10

Trigger Default Warning

As a borrower, I want to receive a warning when my repayment becomes overdue, so that I can take action before the loan falls further behind.

Priority: Medium

Story Points: 3

These stories follow the required "As a [user role], I want [goal], So that [benefit]" format from the Lab 2 handout.
